RADTECH AND I-CAR® TEAM UP TO PROVIDE UV TECHNICAL TRAINING TO COLLISION INDUSTRY

Bethesda, MD – March 3, 2008 – I-CAR®, the international not-for-profit training organization, and RadTech, the Association for UV and EB technology, are teaming up to develop a UV (Ultraviolet) Cure Online Training Program. UV is a fast emerging technology for the collision repair industry, offering increased efficiency, significantly reduced harmful VOC emissions, and lower material usage. UV provides a one component material that avoids mixing, and that safely cures in seconds on exposure to a UV lamp. The technology promises to increase throughput and affords the ability to meet or exceed current and future regulatory requirements.

The online program will be developed and delivered by I-CAR with the technical assistance of RadTech. When launched, the online program will be available worldwide through www.i-car.com/online and those who successfully complete the program will earn 0.25 I-CAR points.

I-CAR Technical Director Jason Bartanen said, "We're excited to be working with RadTech on this first-if-its-kind training program. The I-CAR Online training system offers organizations like RadTech an economical outlet to share technical training information to a worldwide audience in a short amount of time."

I-CAR and RadTech will formally launch the program at the RadTech 2008 Technology Conference and Expo, May 4-7 being held at the Lakeside Center at McCormick Place in Chicago, IL. This expo will include technical presentations, previews of the online training, and demos. For more information or to attend, visit www.radtech2008.com or contact RadTech at ben@radtech.org.

###

I-CAR, founded in 1979, is an international not-for-profit training organization dedicated to improving the quality, safety, and efficiency of auto collision repair for the ultimate benefit of consumers.

RadTech is the non profit trade association dedicated to the advancement of ultraviolet and electron beam technologies. www.radtech.org
